## TABLE FOR CONVERTING WEIGHTS, IN OUNCES, TO NEAREST TENTH OF POUND

\* \* \* \* \*

Prepared for convenience of cooperators in determining  
body weight in record-of-performance work with poultry

Ounces	Tenths of pound
1	.1
2	.1
3	.2
4	.2
5	.3
6	.4
7	.4
8	.5
9	.6
10	.6
11	.7
12	.8
13	.8
14	.9
15	.9

For the purpose of this table the conversion factor has been calculated to the closest tenth of a pound. This accounts for the fact that certain decimal equivalents are the same for different weights. Example: A bird weighing either 4 pounds, 6 ounces, or 4 pounds, 7 ounces, will have an equivalent weight of 4.4 pounds and this figure should be recorded on the U.S.R.O.P. pullet or hen report.
